

MEASURES OF CENTRAL TENDENCY

Mean: It is affected by outlier

What is the average ssc pass mark? **67.303395**

What is the average hsc pass mark? **66.333163**

What is the average degree pass mark? **66.370186**

What is the average entrance test pass mark? **72.100558**

What is the average MBA exam pass mark? **62.278186**

What is the average salary of the student getting placed? **288655.405405**

Median: It is less affected by outlier

What is the median of ssc pass mark? **67**

What is the median of hsc pass mark? **65**

What is the median of degree pass mark? **66**

What is the median of entrance test pass mark? **71**

What is the median of MBA exam pass mark? **62**

What is the median of salary of the student getting placed? **265000**

Mode:

What was the most frequently secured marks by students in SSC? **62**

What was the most frequently secured marks by students in HSC? **63**

What was the most frequently secured marks by students in Degree? **65**

What was the most frequently secured marks by students in Entrance Exam? **60**

What was the most frequently secured marks by students in MBA Exam? **56.7**

What was the most frequently received salary by students? **300000**

MEASURE OF LOCATION OF THE DATA

Percentile

What is the mark at the **25th percentile** for the SSC exam? **60.6**

What is the mark at the **50th percentile** for the HSC exam? **65**

What is the mark at the **75th percentile** for the Degree exam? **72**

What is the salary at the **75th percentile**? **300,000**

What is the salary at the **100th percentile**? **390,000**

The 75th percentile salary is **300,000**, which means **75% of the students have a salary of 300,000 or less**, while approximately **25% of the students have a salary above 300,000**.

The maximum salary (100th percentile) is **390,000**. Therefore, the salary range within the top 25% of students is from **300,000 to 390,000**, giving a difference of:

$$390,000 - 300,000 = 90,000$$

So, the top 25% of students have salaries ranging from 300,000 to 390,000.

.

IQR

	SSC	HSC	Degree	ETest	MBA	Salary
Lesser_Outlier_Range	37.95	42.75	44.5	24.75	45.48	150000.0
Greater_Outlier_Range	98.35	91.15	88.5	118.75	78.72	390000.0
Min	40.89	37.0	50.0	50.0	51.21	200000.0
Max	89.4	97.7	91.0	98.0	77.89	940000.0

Lesser Outlier Range Columns:

Since the minimum value of the HSC column (37) is less than the Lesser Outlier Range (42.75), the HSC column contains lesser outliers. Therefore, the minimum value should not be less than the Lesser Outlier Range.

Greater Outlier Range Columns:

Since the maximum values of the HSC, Degree, and Salary columns are greater than their respective Greater Outlier Ranges, the HSC, Degree, and Salary columns contain greater outliers. Therefore, the maximum value should not be greater than the Greater Outlier Range.

Frequency

- 1) How many students secured 62 marks in SSC? — **11**
- 2) What percentage of students secured 62 marks in SSC? — **0.05%**
- 3) What is the cumulative percentage of students who secured 67 marks or below in SSC? — **0.13%**
- 4) How many students received 3L salary? **22**
- 5) What was the percentage of students received 3.9L salary? **0.06%**
- 6) What is the cumulative percentage of students who received salary up to 3.9L salary? **0.32%**

Skewness

Salary is Positive skewness- **0.8067**

Mode>Mean>Median

300000> 277648>265000

Is my salary data balanced, or are some values pulling it toward one side?

The salary data is positively/right-skewed. This indicates that the distribution has a longer tail toward higher salaries, with some relatively high salary values pulling the mean upward. Therefore, the median can provide a more representative measure of the typical salary than the mean.

Kurtosis

HSC is nearly Mesokurtic and other columns are Platykurtic

Standard Deviation

The Deviation of SSC_P marks from each data: 10.82

The standard deviation of SSC_P marks is 10.82, indicating that the SSC_P marks typically vary by approximately 10.82 marks from the mean of 67.30.
